# FlowBridge | Reviewer Summary

1st Place - EVM Deployment Track, BOT Chain Builder Challenge #1

## APPLICATION POSITION

APPLICATION: READY TO SUBMIT
REQUESTEDSUPPORT: OPTION A - DEX LIQUIDITY SUPPORT
PROGRAM: NOT YET APPROVED / MONITORING NOT YET STARTED
QUALIFICATION: PENDING PROGRAM ONBOARDING
MONITORINGWINDOW: TO BE CONFIRMED BY BOT CHAIN AFTER APPROVAL
ACTIVITY: SUPPORTING PROOF OF MAINNET READINESS AND GENUINE ECOSYSTEM PARTICIPATION

FlowBridge is applying for Option A - DEX Liquidity Support. We are submitting the project's production deployment, technical architecture, verified contracts, on-chain evidence, ecosystem contribution and mainnet readiness for BOT Chain's evaluation. Any support level, incentive allocation, rebate, points or other program benefit will be determined by BOT Chain according to its current program rules and review process.

## MAINNET READINESS

Live non-custodial trading, bridging, MultiSend, staking, verified rewards and guided wallet journeys. V3 executes single-step/staged routes; current V4 executes only the enabled native BOT/BDEX V3 multi-pool atomic class. Live V4 health checks all pass.

## STAKING & REWARDS — VERIFIED STATE

Flexible and 30D completed real-mainnet claim/withdrawal evidence. 30D position #2 is closed; both receipts rechecked successfully. Positions #4/#5/#6 are open with 100 FLOW each for 90D/180D/365D; real maturity is still in progress, not verified.
Unlock times: #4 2027-01-09 16:11:06 UTC; #5 2027-04-09 16:11:53 UTC; #6 2027-10-11 16:12:15 UTC.
All five products passed historical local-fork lifecycle simulations, recorded separately from real maturity. Longer terms remain canary-only in the application. Withdraw returns principal; rewards are claimed separately, including after closure.
Live variable price oracle remains the zero address; no oracle or configuration activation. Genesis reward-days are shared per wallet, not reset per position. Governance / Treasury / Operations Safe thresholds read live: 2 signatures each.
Funded Merkle distributor and historical reward claims are production evidence, not BOT Chain incentive-monitoring results.

## EVIDENCE & INTEGRATIONS

26 useful BOT Mainnet contracts/infrastructure entries: 13 FlowBridge-owned/supporting and 13 external integrations. Current MultiSend also verified on BOT Testnet, BNB Mainnet and BNB Testnet. BDEX/CaSwap and the official BOT Bridge are external protocols, not FlowBridge-owned.
No aggregate volume, users, TVL, liquidity, transaction counts or eligibility percentages claimed. Explorer/code evidence is not a third-party audit.

## OWNER NEXT ACTION

Review the live official application form order and compliance terms personally. Refresh signed reviewer links when ready. No application submission or compliance acceptance was performed.
